Executive Advertising

The website Executive Advertising features a state-of-the-art customization tool that allows users to personalize promotional products with custom images and text. Built using Fabric.js and Angular.js, the tool offers a user-friendly interface where customers can easily upload images, add text, and adjust design elements in real time.

Users benefit from a seamless experience, as the tool provides instant previews of their customized products, ensuring that the final design meets their expectations. The platform supports a wide range of customization options, including the ability to layer images, select fonts, and choose colors, offering the flexibility needed to create unique, high-quality designs.

Once a design is finalized, the tool generates a high-resolution image of the product, which is securely stored in an Amazon S3 bucket. This ensures that users' designs are safely preserved and easily accessible for future orders.

Document Management System

developed a robust Document Management System (DMS) using a custom PHP framework, designed to streamline document handling within an organization. The system functions similarly to Windows File Manager, providing an intuitive interface where users can easily navigate, organize, and manage files.

Key features of the DMS include role-based access controls, ensuring that documents are securely managed according to user permissions. Specific roles define who can view, edit, or manage documents, thus safeguarding sensitive information and maintaining document integrity. This system allows administrators to assign roles that limit access based on the user's level of responsibility, ensuring that only authorized personnel can make changes or view confidential files. The DMS supports a wide range of document types and includes advanced search functionalities, making it easy for users to locate specific files quickly. Additionally, version control is integrated into the system, allowing users

Educational website - guru99.com

developed an educational website similar to W3Schools.com, focused on providing comprehensive resources for learning web development. Built using WordPress, the platform offers a user-friendly experience, making it accessible to beginners and experienced developers alike.

The website features a wide range of tutorials, articles, and interactive examples covering various aspects of web development, including HTML, CSS, JavaScript, PHP, and more. Each topic is presented in a clear and structured manner, allowing users to progress through lessons at their own pace. The platform also includes hands-on coding exercises and quizzes, enabling users to test their knowledge and reinforce their learning

5 Months

VUMC

developed a website for a medical center, featuring custom plugins designed to enhance user access to vital medical information. One of the key plugins integrates with third-party APIs to provide users with access to a vast database of medical studies. For instance, users interested in learning about cancer

can search the topic and receive relevant, up-to-date study results, facilitating self-education and research.

Another significant plugin pulls data from a MySQL database, displaying detailed information about medical professionals associated with the Vanderbilt University Medical Center (VUMC). This functionality allows users to easily find and learn about the qualifications, specialties, and availability of medical experts within the center. The plugin ensures that users have quick access to accurate and comprehensive professional profiles, improving their overall experience on the platform.

The website's design prioritizes user-friendliness and responsiveness.
